CBW Automation Brings High-Speed Lid System to Netstal's ELIOS 7500 at K 2016

Fort Collins, CO: At the 2016 K-show, Netstal will reveal its new ELIOS 7500 injection molding machine. According to Euromap standards, the electrical clamping makes the ELIOS the fastest machine of its size. During the demonstration, CBW will be providing the Automation for the product created at Hall 15 BoothB27/C24C27/D24.

CBW Automation is a full-service custom automation solutions designer and equipment manufacturer offering the plastic injection molding and thermoforming industries the highest quality, fastest cycling and most efficient automation available on the market today. Systems include: stacking, sorting, closing, inspection/quality control, automatic or manual case packing, and palletizing, for a variety of different products.

The new ELIOS 7500 is a powerful high-performance injection molding press with a clamping force of 750 metric tons, making it an extremely productive system for realizing successful packaging solutions. The ELIOS 7500 will be in continuous operation during the eight day trade fair, running a 2.8 gram round lid in a 24+24 stack mold with a cycle time of 4 seconds.

The CBW Automation will be providing a L-790 with spin bar accumulation for manual packaging. The spin bar lid system was the first system CBW manufactured 45 years ago, and the L-790 is the most efficient lid unscramble on the market. The L-790 systems are typically deployed for a round lid and container applications up to 1200 PPM. At the show, this system will be running at 720 PPM (more than 43000 parts per hour) to meet with the ELIOS 7500 4 second cycle time.

About CBW Automation: CBW Automation Inc. is a recognized leader in customized automated systems for high-speed injection molding and thermoform packaging lines. The company has dedicated its engineering and manufacturing resources to designing and developing new automation systems to meet the ever-increasing requirements of its customers for speed, precision handling and quality. CBW's new **Advantage Series** automation system provides customers with the most innovative automation solution yet, offering an alternative system that promises high performance and manufacturing flexibility to meet today's packaging manufacturers' requirements.
